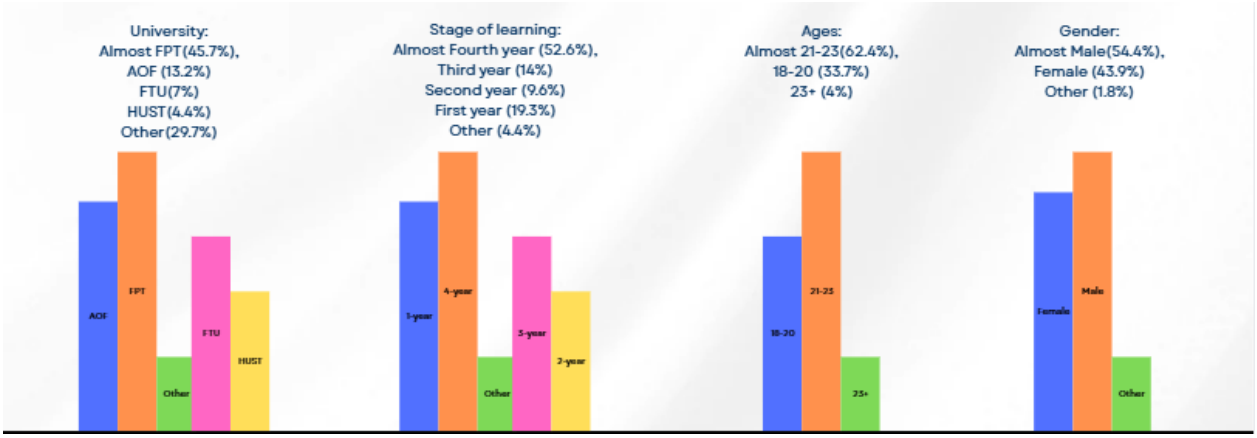
1. Online Survey Analysis

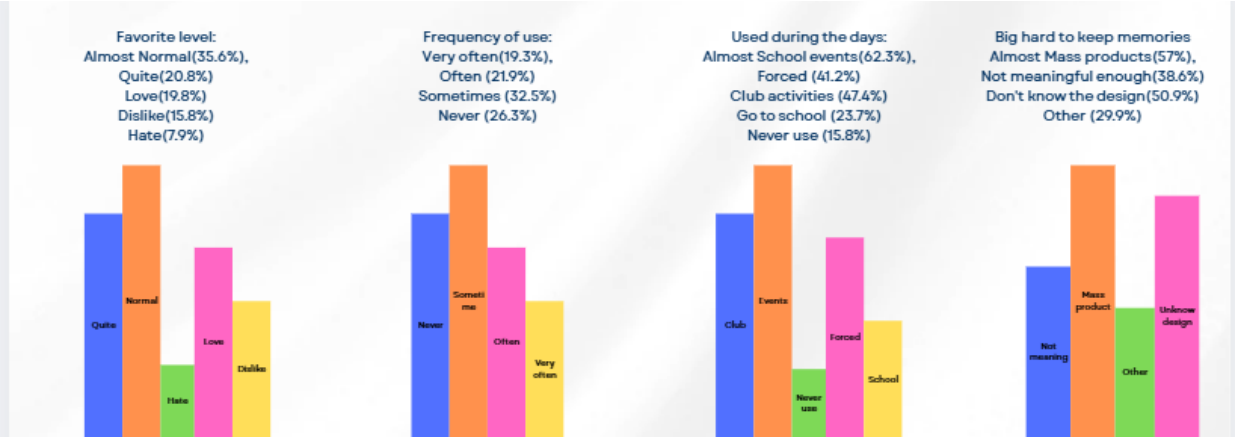


1.1. Survey Demographics

The first section shows that we are reaching the right target customer group:

- **Target group:** Mainly students from FPT University (45.7%).
- **Age:** Strongly concentrated in the 21–23 age group (62.4%).
- **Year of study:** The majority are final-year students (52.6%).
- **Gender:** A relatively balanced distribution between males (54.4%) and females (43.9%).

Conclusion: *The statistical results indicate that our primary target customers are final-year university students (mainly from FPT University), aged between 21 and 23, with a fairly balanced gender distribution between male and female users.*



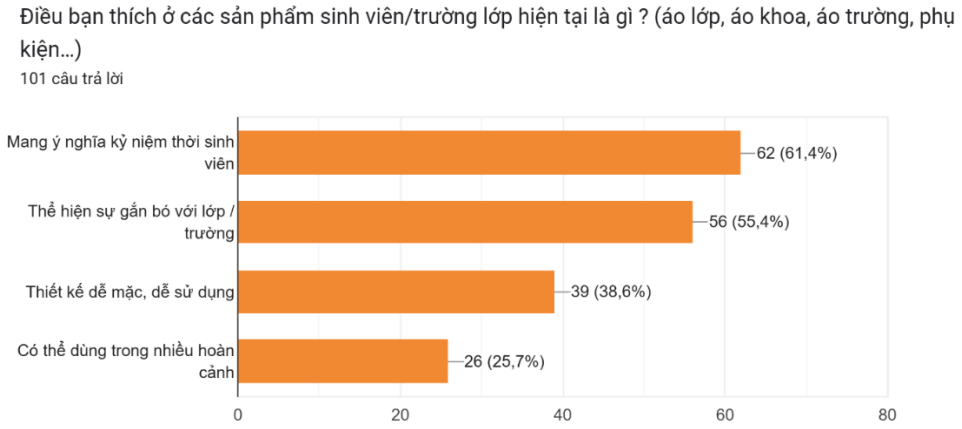
1.2. Current Problems & Challenges

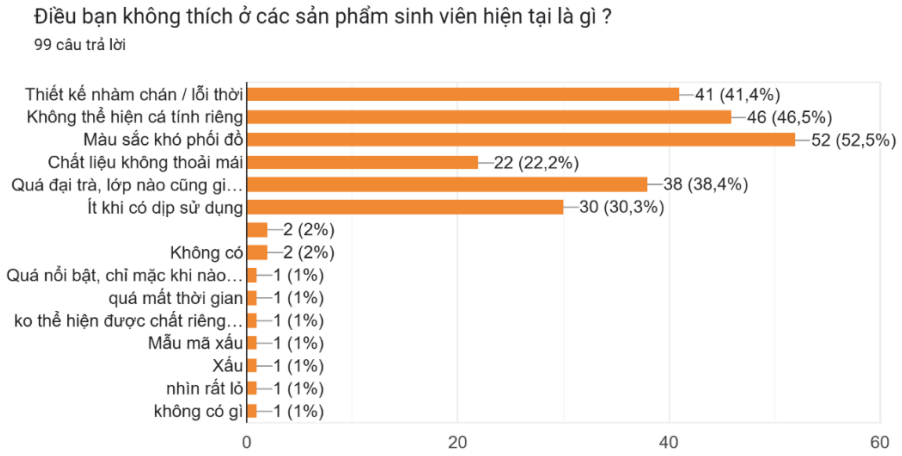
Current users are not highly engaged with souvenir products due to several key reasons:

- **Habits:** They only occasionally keep souvenirs (32.5%) and mainly do so during school or class-related events (62.3%).
- **Product issues:** Existing products are perceived as too generic (57%) and lacking meaningful value (38.6%).
- **Design barriers:** Nearly half of the respondents (50.9%) do not know how to design personalized products by themselves.

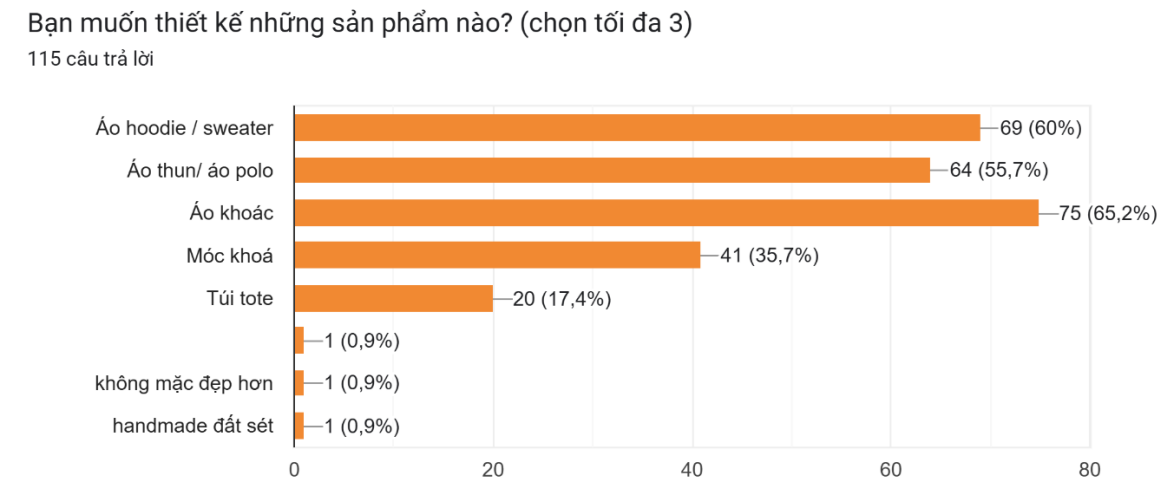
Conclusion: *Current users only store souvenirs occasionally, mostly during school-related events or when required. They perceive this activity as ordinary and unexciting because existing products are overly generic and difficult to personalize.*

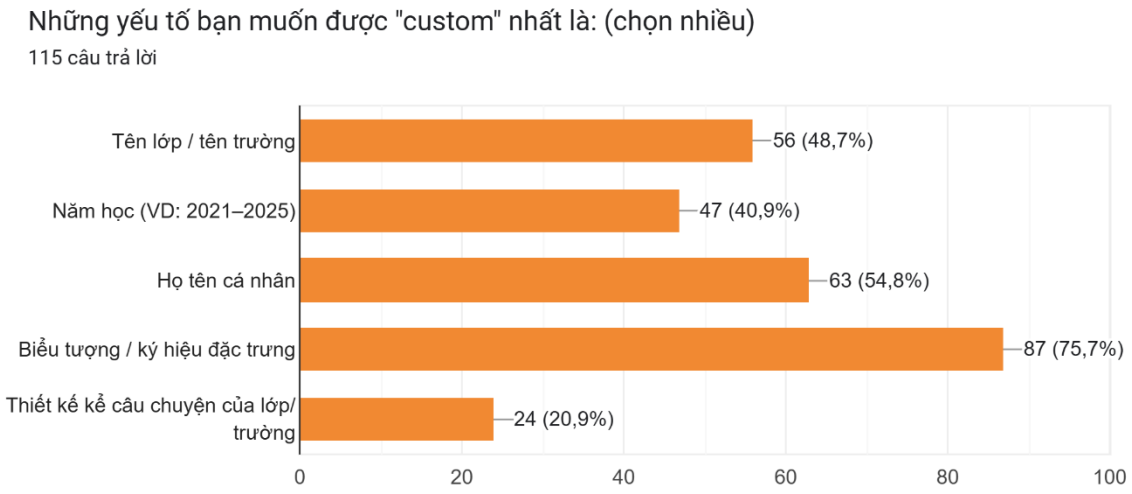
- **Points of dissatisfaction:** Users are dissatisfied with current products due to boring designs (40.8%) and color schemes that are difficult to match with outfits (52%).

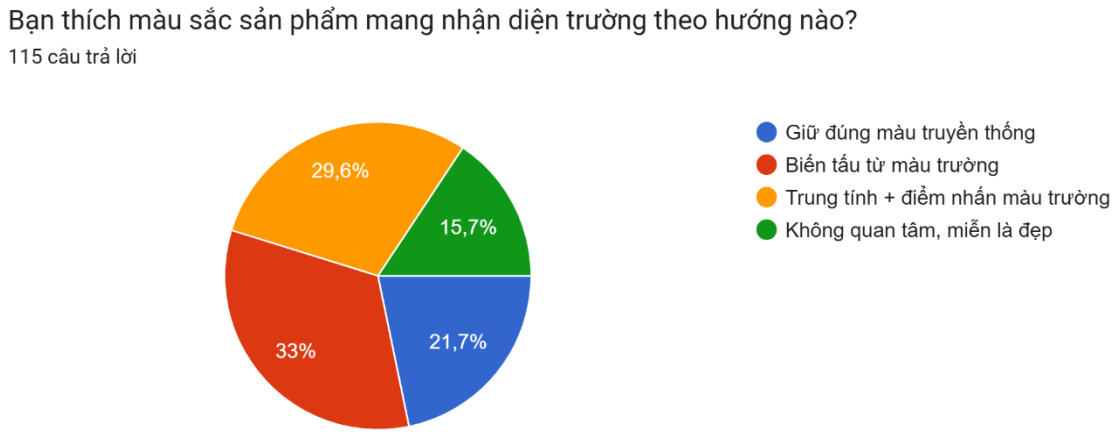




Conclusion: *Students highly value products that carry meaningful memories (62%) and reflect a sense of connection with their school or class (55%). However, they are not satisfied with current products due to color schemes that are difficult to coordinate with outfits (52%), a lack of personal expression (46.9%), and boring designs (40.8%). In addition, most students only use these products during school-related events (62.3%) and face difficulties in designing unique, personalized items on their own (50.9%).*







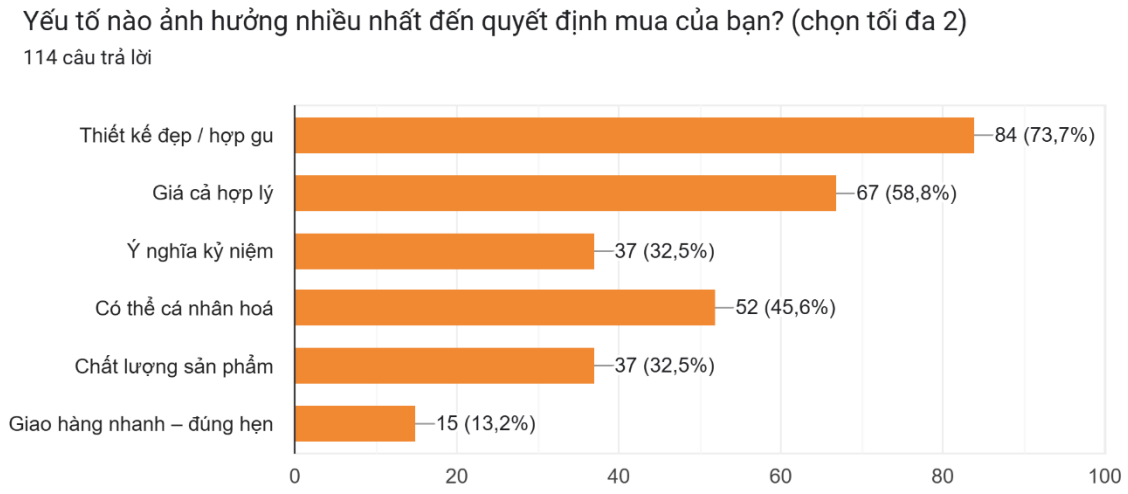
1.3. Customer Desires

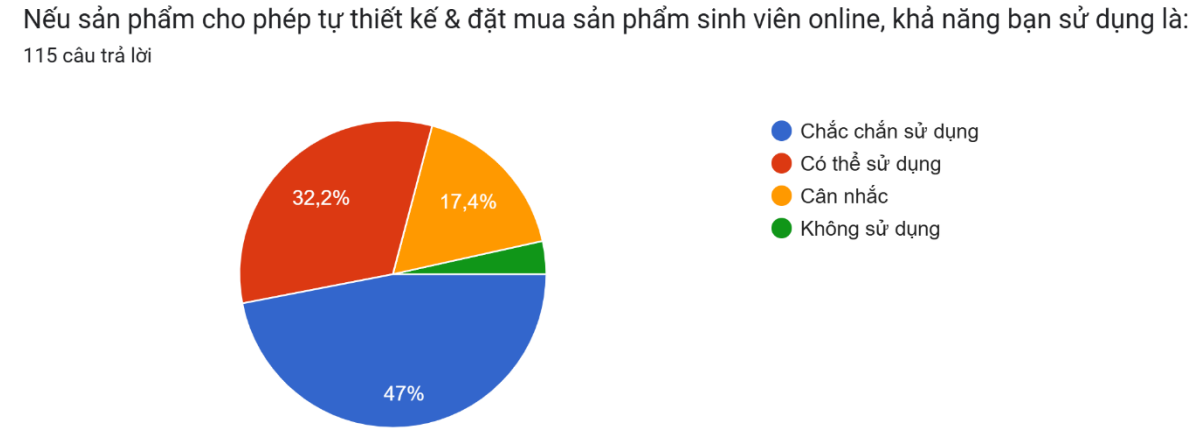
The data reveals a significant opportunity for product personalization:

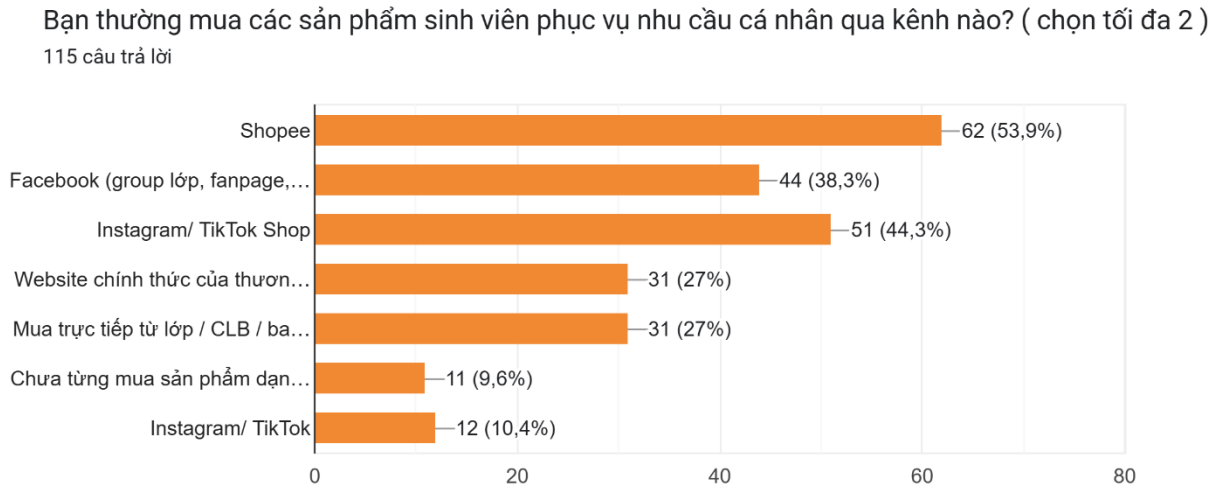
- **Preferred products:** Jackets (64.9%), hoodies/sweaters (59.6%), and T-shirts (56.1%) are the most favored items.
- **Customization elements:** Customers particularly prefer distinctive symbols/icons (75.4%) and personalized name printing (54.4%).
- **Color preferences:** Instead of traditional school colors, users favor modified color variations (33.3%) or neutral tones for everyday wear (28.9%).

Conclusion: *Users demonstrate a strong demand for customized products. The most preferred items are jackets (64.9%) and hoodies/sweaters (59.6%). In terms of design, customers place high importance on attractive designs (54.4%) and distinctive symbols or icons (75.4%). Regarding color choices, many users prefer neutral tones with*

subtle accents (28.9%) or variations based on the school's original colors (33.3%) to achieve a more fashionable look.







1.4. Buying Behavior & Market Potential

This section provides a foundation for platform development:

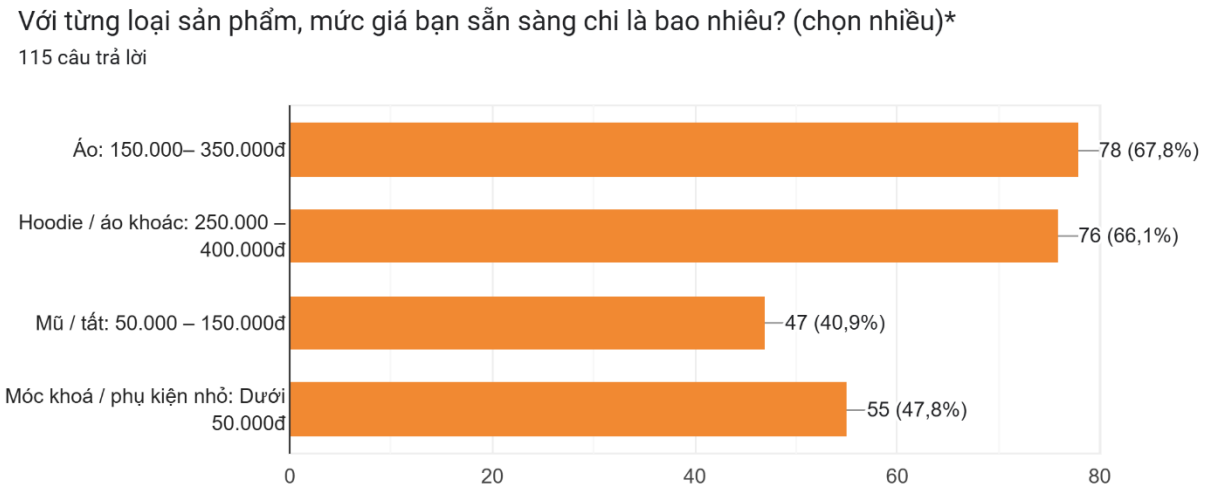
- **Purchase criteria:** Attractive and style-matching design is the most important factor (73.5%), followed by price (58.4%).
- **Shopping channels:** Shopee (53.5%) and TikTok Shop (44.7%) are the primary purchasing platforms.

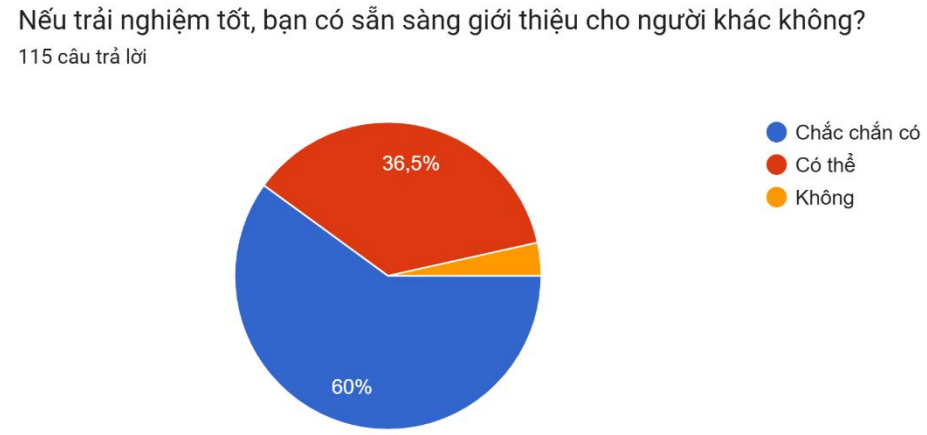
Conclusion: *When purchasing products, students prioritize attractive, style-matching designs (73.5%) and reasonable pricing (58.4%). They mainly shop via Shopee (53.5%) and TikTok Shop (44.7%). Most importantly, nearly 80% of users are willing to use an online platform that allows them to design and order customized products.*

To attract users, the most appealing incentives include free gifts (30.7%), volume-based discounts (29.8%), and free personal name printing (27.2%).

- **Willingness to pay:**
  - 150,000–350,000 VND for T-shirts.
  - 250,000–400,000 VND for jackets/hoodies.

- **Positive feedback:**
  - 79% of users are willing to use an online platform that allows product design and ordering.
  - Nearly 60% would definitely recommend the platform to others if they have a positive experience.





Our project has strong market potential, as 79% of students express interest in using an online platform that allows them to design personalized products. Most users are willing to pay between VND 150,000–350,000 for T-shirts and VND 250,000–400,000 for hoodies or jackets. Their top priorities are attractive design (73.5%) and reasonable pricing (58.4%). With a positive user experience, nearly 60% of users would confidently recommend the service to others.

2. Direct Interview

Overview

- **Methodology:** In-depth 1-on-1 Interviews.
- **Objective:** To validate student dissatisfaction with current university merchandise and assess the demand for customizable, high-quality alternatives.
- **Scope:** This report synthesizes findings from **4 key interviewees** across three major universities (FPT, VNU, AOF), categorized into two primary segments: "Aesthetic & Style Seekers" and "Comfort & Identity Seekers."

2.1 PART I: THE "STYLE & AESTHETIC" SEGMENT (FPT UNIVERSITY)

2.1.1.Subject 01: The "Senior Co-Creator"

- **Name:** Khanh Huyen
- **Institution:** FPT University (Senior/4th Year).
- **Behavior:** She restricts uniform usage strictly to mandatory events like orientation or OGT. She prefers a comfortable, freestyle campus look and typically buys merchandise via clubs or student projects rather than the official store.
- **Pain Points:**
    - **Aesthetics:** She finds the school's signature bright orange color "too flashy" and difficult to coordinate with daily outfits.
    - **Fit:** The current uniforms are described as "baggy" and "shapeless".
- **Expectations:** She desires **"Co-creation."** She wants the ability to customize the layout, slogan, and form while keeping the school logo. She specifically prefers collarless tees or Bomber jackets over rigid designs.
- **Willingness to Pay (WTP):** She is willing to pay if the design is her own idea (co-created) and fits her personal style.

2.1.2Subject 02: The "Fashion-Conscious User"

- **Name:** Nguyen Khanh Van
- **Institution:** FPT University.

- **Spending Power:** High (~1,000,000 VND/month for fashion).
- **Behavior:** She rarely wears the school uniform (only for exams) and makes independent purchase decisions.
- **Pain Points:**
    - **"Uniform Stigma":** She dislikes looking exactly like everyone else ("bị giống mọi người") and feels the current design lacks personality.
    - **Style Mismatch:** She prefers "girly/stylish" designs and subtle colors, finding the current orange too glaring.
- **Expectations:** She values the school logo for its identity ("tính kỷ niệm") but wants it on a "better-looking product". She desires "Instagrammable" designs that are stylish ("điệu").
- **Willingness to Pay (WTP):** She is willing to pay **250,000 – 350,000 VND** for a piece that is simply "Beautiful".

2.2 PART II: THE "IDENTITY & COMFORT" SEGMENT (VNU & AOF)

2.2.1.Subject 03: The "Identity Seeker"

- **Name:** Hoang Thi Lan
- **Institution:** Vietnam National University (VNU).
- **Status:** Freshman, active club member.
- **Behavior:** Lan exhibits "passive compliance," purchasing mandatory items at the start of the year but limiting usage to 2–3 times/week strictly for club activities.
- **View on School Gear:** She views the current gear as a **"Required Uniform"** for attendance, not a "Fashion Item" for self-expression.
- **Pain Points:**
    - **Generic Design:** She describes the gear as *"too generic"* ("chung chung"), lacking unique identity.
    - **Psychological Barrier:** She feels hesitant to wear it daily because it does not reflect her personality.
- **Expectations:** Lan showed strong enthusiasm for **customizing Name, Slogan, and Form** while keeping the School Logo to verify membership.
- **Willingness to Pay (WTP):** She is willing to pay a premium (**>200,000 VND**) for a product that offers personalization, viewing it as a confidence booster.

2.2.2. Subject 04: The "Experience-Oriented User"

- **Name:** Nguyen Quynh Anh
- **Institution:** Academy of Finance (AOF).
- **Status:** Owns a jacket & PE shirt.
- **Behavior:** Wears school gear occasionally (1–2 days/week) despite owning a full set.

- **View on School Gear:** She views it as **"Uncomfortable Utility"**—she wants to wear it for school pride but is hindered by the poor physical experience.
- **Pain Points:**
    - **Sensory Discomfort:** The deal-breaker is *"uncomfortable fabric,"* which she specifically cited as the main reason for disliking the product.
    - **Usability:** The material quality makes it undesirable for daily use.
- **Expectations:** Her priority is **"Premium Material."** She is enthusiastic about customizing the Slogan/Form with the School Logo, provided the fabric is upgraded.
- **Willingness to Pay (WTP):** She expressed a clear commitment to paying a higher price (**>250,000 VND**) for better quality, stating she would "pay more to wear it more."

2.3. SYNTHESIZED INSIGHTS (CROSS-ANALYSIS)

Across all four interviews, a consistent pattern emerges regarding the gap between *School Pride* and *Product Reality*:

1. **Rejection of Uniformity, Not Identity:** Whether it is the "Uniform Stigma" mentioned by Khanh Van or the "Generic Design" mentioned by Lan, students do not want to look like clones. They all want to retain the School Logo but demand control over the aesthetic execution.
2. **The "Quality & Comfort" Mandate:** For students like Quynh Anh and Khanh Huyen, physical attributes (baggy fit, bad fabric) are immediate deal-breakers.
3. **High Willingness to Pay for Customization:** All subjects confirmed they would pay significantly above the market average (250k–350k range) if the product allows for **Co-creation** (Custom slogans, forms, and patterns).

2.4. CONCLUSION & RECOMMENDATION

Core Insight:

"Gen Z students are proud of their university brand but refuse to compromise on Style and Comfort."

Strategic Proposal:

- **Product:** Launch a line of "Co-created Merchandise" allowing students to select Form (Bomber/Tee), Fabric (Premium Cotton), and Custom Details (Slogans/Names).
- **Pricing:** Position the product in the **250,000 – 350,000 VND** tier.
- **Design:** Shift from "Flashy/Generic" to "Subtle/Stylish" to meet the demands of fashion-conscious seniors and freshmen alike.

3. Customer Persona

Based on the survey results, our primary target customer segment is university students aged 21 to 23, mainly from FPT University, with a relatively balanced gender distribution. Our representative persona is Nguyễn Khánh Vân, a 22-year-old university student.

Background	**Finance**

• **S**tudent
• Active in school & class events
	• Income mainly from family
	• Willing to pay:
	  ○ T-shirt: 150,000–350,000 VND
	  ○ Hoodie/Jacket: 250,000–400,000 VND

Needs	**Influence Factors**
• Customizable school merchandise • Fashionable designs, easy to wear daily • Meaningful school & class symbols	• Friends & classmates • Social media reviews (TikTok, Instagram)
Hopes and Dreams	**Online Behavior**
• Own meaningful university souvenirs • Wear school merchandise confidently outside campus • Strengthen class connection through shared symbols	• Shops on Shopee & TikTok Shop • High interest in online customization platforms
Make Their Life Easier	**Worries** and Fears
• Online platform for self-design & ordering • Ready-made templates & school icons	• Designs too generic & boring • Colors hard to style

• Group discounts & free name printing	• Hard to self-design unique products

- The core insight here is that students want school merchandise to look like real fashion products, be customizable, and carry genuine sentimental value, rather than being just a compulsory item they have to wear.

4. Customer Journey Map

Stage	Awareness	Consideration	Customize	Purchase	Loyalty
Time	1–3 days	2–5 days	1–2 days	Same day	1–6 months
Touchpoints	School uniforms TikTok, Shopee Friends' custom merch	Website/App Templates, mockups Reviews, Shopee/TikTok Shop	Design tool Form, color options Logo, name customization	Online store Shopee/TikTok payment Discounts, free name print	Product received Daily use at school Social media
Pain Points	Generic designs Lack of identity	Unsure about price Afraid design is difficult	Afraid design looks bad Hard to choose colors	Concern about quality Mockup vs reality gap	Limited new designs
Emotion	Neutral → Curious	Interested	Excited	Confident	Proud
Customer Actions	Notices boring uniforms Sees better custom merch	Explores website Compares options	Selects form, color Adds logo, name	Applies discount Completes purchase	Wears frequently Shares on social media
Opportunities	Position merch as fashion Show inspiring designs	Provide easy templates Show student examples	Simple drag-and-drop tool Preview mockup	Ensure quality guarantee Offer group discounts	Launch new collections Referral program

The Customer Journey Map illustrates the process that university students go through when discovering, evaluating, customizing, purchasing, and using custom school merchandise. This journey reflects both the functional needs and

emotional experiences of students, highlighting key touchpoints, pain points, and opportunities for improvement. The journey consists of five main stages: Awareness, Consideration, Customize, Purchase, and Loyalty. Unlike traditional merchandise purchasing journeys, this model includes a separate Customize stage, which is critical because personalization is the core value proposition of the product.

In the Awareness stage, which typically lasts between one to three days, students first become aware of custom school merchandise through various touchpoints such as existing school uniforms, social media platforms like TikTok and Facebook, and observing friends wearing customized apparel. At this stage, students are not actively searching for new merchandise, but they begin noticing the limitations of their current uniforms. Many students perceive traditional uniforms as generic, repetitive, and lacking individuality. Seeing visually appealing customized merchandise worn by peers or shared on social media creates curiosity and opens their minds to alternative possibilities. Emotionally, students transition from a neutral state to curiosity. This stage presents an important opportunity for businesses to reposition school merchandise as a form of fashion and identity expression rather than simply a mandatory uniform. By showcasing inspiring designs and emphasizing individuality, brands can effectively capture student attention.

The Consideration stage usually lasts between two to five days and involves active exploration and evaluation. During this stage, students interact with customization platforms such as websites or mobile applications, browse design templates, view mockups, and read reviews from other students. They may also compare options across platforms like Shopee and TikTok Shop to evaluate price, quality, and design flexibility. Students begin imagining how customized merchandise would look on themselves and whether it aligns with their personal style. Emotionally, students feel interested and engaged because customization gives them a sense of control and creative involvement. However, several pain points still exist. Students may feel uncertain about whether the price is affordable or worry that the design process might be complicated. These concerns can create hesitation. Businesses can address these barriers by providing easy-to-use templates, offering design suggestions, and showcasing real examples created by other students to increase confidence and reduce perceived risk.

The Customize stage, which typically lasts one to two days, is the most distinctive and valuable stage in this journey. At this point, students directly interact with customization tools that allow them to select product types such as t-shirts, hoodies, or bomber jackets, choose colors and styles, and add personalized elements such as school logos, names, or slogans. This stage transforms students from passive buyers into active creators. As students design their own merchandise, they develop a strong emotional connection to the product because it reflects their personal identity. Emotionally, students feel excited and empowered, as they are able to create something unique and meaningful. However, some students may still face challenges, such as fear that their design may not look good or difficulty choosing appropriate color combinations. To improve this experience, businesses should provide user-friendly drag-and-drop design tools, real-time previews, and recommended design combinations. These features simplify the process and enhance the user experience.

The Purchase stage typically occurs within the same day once students are satisfied with their design. During this stage, students interact with online stores and payment systems, including Shopee and TikTok Shop. Promotional

incentives such as discounts or free name printing can further encourage purchase decisions. Students finalize their purchase by applying discount codes, confirming their design, and completing payment. Emotionally, students feel confident and satisfied because the product reflects their personal preferences. However, some concerns may still remain, particularly regarding product quality and whether the final product will match the mockup shown online. To address these concerns, businesses should provide quality guarantees, realistic product images, and transparent product descriptions. These measures help build trust and increase purchase conversion rates.

The Loyalty stage extends from one to six months after purchase and focuses on product usage and post-purchase engagement. During this stage, students receive their customized merchandise and begin incorporating it into their daily lives. They wear it to school, club activities, and social events, and often share photos on social media. These behaviors reinforce emotional attachment and strengthen their sense of identity and belonging. Emotionally, students feel proud because the product represents both their school affiliation and their individuality. However, one major pain point at this stage is the limited availability of new designs. Without fresh options, students may lose interest over time. This presents an opportunity for businesses to introduce new collections regularly, offer seasonal designs, and implement referral programs to encourage repeat purchases and brand advocacy. Students who are satisfied with their experience are likely to recommend the product to friends and classmates, becoming organic promoters of the brand.

Overall, the Customer Journey Map highlights that students do not reject school merchandise itself, but rather reject the lack of individuality associated with traditional uniforms. Students are willing to purchase school merchandise when it allows them to express their personal identity while maintaining a connection to their school. Customization plays a critical role in transforming school merchandise from a functional requirement into a meaningful and emotionally valuable product. By addressing key pain points and supporting students throughout each stage of the journey, businesses can increase customer satisfaction, improve conversion rates, and build long-term loyalty. This journey demonstrates that personalization is not only a product feature but also a strategic advantage that enhances both emotional engagement and business performance.

5. Product Market Fit Canvas

5.1. Customer segment

- **Characteristics & Job To Be Done**

The target customers of the platform are students, a group that frequently uses the internet, social media, and e-commerce platforms. They have a strong demand for ordering T-shirts for classes, faculties, student clubs, or campus events.

The core job they want to accomplish is to create T-shirt designs that reflect both personal identity and collective spirit in a fast and convenient way, without requiring professional design skills, and at a price level that fits a student budget.

- **Problems & Needs**

Traditional class or uniform T-shirts are often standardized, repetitive, and lack creativity, failing to express the unique identity of each group. The conventional ordering process usually involves multiple intermediaries such as designers and printing workshops, which leads to long waiting times, limited flexibility for revisions, and little control over the final design.

Meanwhile, students' desire for self-expression and community identity is increasing, creating a strong need for a more flexible, user-controlled, and creative solution.

- **Channels**

The platform primarily reaches users through its website, which features an intuitive drag-and-drop T-shirt design interface. In addition, social media channels such as Facebook and TikTok especially student groups, class groups, and club communities play a crucial role in promotion and word-of-mouth diffusion. Offline word-of-mouth within student communities and teams is also an effective channel for user acquisition.

- **User Experience**

Users can access the platform easily without any prior design skills. The simple drag-and-drop interface allows them to customize T-shirts and preview the final product in real time. The ordering and payment processes are completed entirely online, ensuring convenience and ease of use. Overall, the experience is creative, engaging, and encourages collaborative design among friends and group members.

5.2. PRODUCT / SERVICE

- **Alternatives**

Existing alternatives include ordering T-shirts from traditional printing shops, purchasing pre-printed T-shirts from e-commerce platforms such as Shopee or Lazada, or hiring a freelance designer. However, these options often lack flexibility, involve higher costs, or fail to meet students' personalization needs.

- **Key Features**

The platform offers an online drag-and-drop T-shirt design tool that allows users to easily customize colors, logos, names, slogans, and illustrations. It also provides a library of ready-made templates specifically designed for schools, classes, and student clubs.

Production follows a Print-on-Demand model, meaning T-shirts are printed only after an order is placed, helping to optimize costs and reduce inventory risks.

- **Value for Channels**

Designed T-shirts can be easily shared on social media, facilitating organic spread within student communities, especially for class and event T-shirts. Visually appealing and interactive design content makes the platform highly suitable for promotion on channels such as TikTok and Facebook.

- **Key Metrics**

Website traffic is expected to reach around 450+ visits per month, which is reasonable for the early stage when the platform is newly launched within a limited number of universities and spreads mainly through social media, class groups, and student clubs.

Regarding average time on site, users are expected to spend about 5–7 minutes per session, as they need time to choose templates, customize their designs, and discuss ideas with friends before making a decision.

The bounce rate is projected to stay below 45%, indicating that the website is engaging and easy to use. This is an acceptable level for a new platform and suggests that many visitors continue exploring the site rather than leaving immediately.

5.3. REVENUE MODEL & RETENTION STRATEGY

- **Revenue Model**

The platform generates revenue primarily through product sales under the Print-on-Demand model, where users design, order, and pay based on quantity.
In addition, a Freemium model allows users to access basic features for free, while advanced customization options such as premium templates, special fonts, and exclusive illustrations require payment.
The platform also offers group order services and small-scale B2B solutions for class T-shirts, club uniforms, and student event apparel with volume-based discounts. Furthermore, it collaborates with brands or sponsors to place partner logos on event T-shirts.

- **Retention Strategy**

To retain users, the platform offers incentives such as discounts on repeat orders or free shipping for returning customers. New design templates are updated regularly based on seasons and student trends to maintain novelty and interest.
Additionally, encouraging users to share their designs on social media in exchange for vouchers helps increase engagement and drive organic growth within student communities.
